TEST CONDITIONS AND TOLERANCES

- The racking load is determined in a test with 25 kg bags on a conventional pallet racking system.
- Dimensional tolerance of the pallet: +5 / -5 mm. Weight tolerance: +5 / -5 %.
- We test our pallets with an evenly distributed, stable and homogeneous load of bagged goods, for a predetermined period at an ambient temperature of 20 °C. Different load conditions may lead to different results and must be assessed separately.
